Overdose Symptoms

- Slow or shallow breathing
- Blue or pale skin, lips, or fingertips
- Unresponsiveness
- Pinpoint pupils
- Limpness or inability to move
- Gurgling or choking sounds
- Vomiting

If you suspect someone is experiencing an opioid overdose, **take immediate action, and call 911.**

Narcan® Nasal Spray

Naloxone, commonly known as Narcan®, is a nasal spray medication that can reverse the effects of an opioid overdose.

Where can you get Narcan®?

You can get Narcan® over the counter at participating pharmacies or by prescription from a healthcare provider. Some harm reduction programs distribute Narcan® for free or at a reduced cost.

How do you use Narcan®?

STEP 1: CHECK

- **CHECK** for a suspected overdose: the person will not wake up or is very sleepy or not breathing well
- yell “Wake up!”
- shake the person gently
- if the person is not awake, go to Step 2

STEP 2: GIVE 1st dose in the nose

- **HOLD** the nasal spray device with your thumb on the bottom of the plunger
- **INSERT** the nozzle into either NOSTRIL
- **PRESS** the plunger firmly to give the 1st dose
- 1 nasal spray device contains 1dose

STEP 3: CALL

- **CALL 911** immediately after giving the 1st dose

STEP 4: WATCH & GIVE

- **WAIT** 2-3 minutes after the 1st dose to give the medicine time to work
- if the person wakes up: Go to Step 5
- if the person does not wake up:
 - **CONTINUE TO GIVE** doses every 2-3 minutes until the person wakes up
 - it is safe to keep giving doses

STEP 5: STAY

- **STAY** until ambulance arrives: even if the person wakes up
- **GIVE** another dose if the person becomes very sleepy again
- You may need to give all the doses in the pack

*This guide is not meant to replace the nasal spray instructions. Please review the instructions included with your nasal spray.
